DETAILED ACTION

and

REASONS FOR ALLOWANCE

1. Claims 2-6, 8-21, 23, 24, 30 and 31 are allowed.

Examiners Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: While *Vasilko* teaches the sue of a "core board" and *Sample* teaches a *port assignment conversion board* as well as *said port assignment conversion board being coupled to said core board via a harness*, **none of these references taken either alone or in combination with the prior art of record disclose or suggest**, two transfer techniques where use of an internal memory is withheld for a first one of the two transfer techniques but used to store data in a second one of the two transfer techniques, carried out before a second action of an application responsive to an interrupt request from the core board to the mother board, specifically including:

(claim 2) "wherein a first one of the two transfer techniques transfers a first portion of the data by way of said PCI bus, bus controller, and the second internal bus without using said internal memory, the first one of the two transfer techniques being invoked for acquiring input information on the mother board during a first action of an application, and a second one of the two transfer techniques transfers a second portion of the data via said internal memory, wherein the second portion of the data from one of said one or more devices is stored in said internal memory via said first internal bus and said bus controller, and the second portion of the data stored in said internal memory is transmitted to said first communication block via said bus controller concurrently, wherein the second transfer technique is carried out before a second

action of the application responsive to an interrupt request from the core board to the mother board.”,

(claim 23) “wherein a first one of the two transfer techniques transfers a first portion of the data by way of said PCI bus, bus controller, and the second internal bus without using said internal memory, the first one of the two transfer techniques being invoked for acquiring input information on the mother board during a first action of an application, and a second one of the two transfer techniques transfers a second portion of the data via said internal memory, wherein the second portion of the data from one of the peripheral devices is stored in said internal memory via said first internal bus and said bus controller, and the second portion of the data stored in said internal memory is transmitted to said first communication block via said bus controller concurrently, wherein the second transfer technique is carried out before a second action of the application responsive to the interrupt request from the core board to the mother board.”, **in combination with the remaining elements and features of the claimed invention.** It is for these reasons that the Applicants’ invention defines over the prior art of record.

Further, the Examiner has found Applicants’ arguments, as set forth in the response dated 10/28/2008, more specifically on page 11, to be, in combination with the amendments to the instant claims, to be persuasive.

2.1 Dependent claims 3-6, 8-21, 24, 30 and 31 are allowed for at least the reason that they depend upon an allowed base claim.

2.2 Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
